

630 mm PE100 PN10 HDPE Pipeline for Lift Irrigation Projects

Solanki Industries (Solanki Pipes) executed the installation and jointing of 630 mm PE100 PN10 HDPE pipelines for lift irrigation and high-pressure water transmission applications, demonstrating expertise in handling large-diameter, high-strength HDPE piping systems.

Project Overview

The project involved handling, alignment, and butt fusion jointing of 630 mm PE100 PN10 HDPE pipes, commonly used in lift irrigation schemes where water is pumped under pressure from source points to elevated command areas.

Material & Technical Specifications

- Pipe Diameter: 630 mm
- Material Grade: PE100
- Pressure Rating: PN10
- Manufacturing Standard: IS 4984 (Bureau of Indian Standards)
- Jointing Method: Butt Fusion Welding
- Design Advantage: High pressure-bearing capacity with long service life

Verified Technical References

- BIS IS 4984:2016 – HDPE Pipes for Water Supply
- CPHEEO Manual on Water Supply & Treatment (Govt. of India)

Execution Highlights

- Mechanised handling of large-diameter PE100 pipes
- Accurate alignment to ensure stress-free jointing
- Leak-proof butt fusion joints suitable for pressure mains
- Execution aligned with standard lift irrigation practices

Application Area

- Lift irrigation pumping mains
- High-pressure irrigation pipelines
- Water transmission lines for agricultural command areas

- Rural and semi-urban water infrastructure
